TOP 5 DATA ANNOTATION TRENDS FOR 2021

#1 Predictive Annotation Tools

Increased use of predictive annotation tools to automatically detect and label items based on similar manual annotations.

#2 Customized Reporting

Detailed reporting, particularly on quality and throughput, to analyze the workflow productivity, and make informed decisions

#3 Focus on Quality Control

Teams focused exclusively on quality control, comprising experts with deep understanding of the subject matter and the data

#4 Workforce of Experts

Specialist teams trained with custom curricula deployed on projects within domains like healthcare, finance, and the public sector

#5 Specialized Partner Ecosystem

Ecosystem providers with specialized expertise either in data labeling or metadata creation or in productive workflow setup
